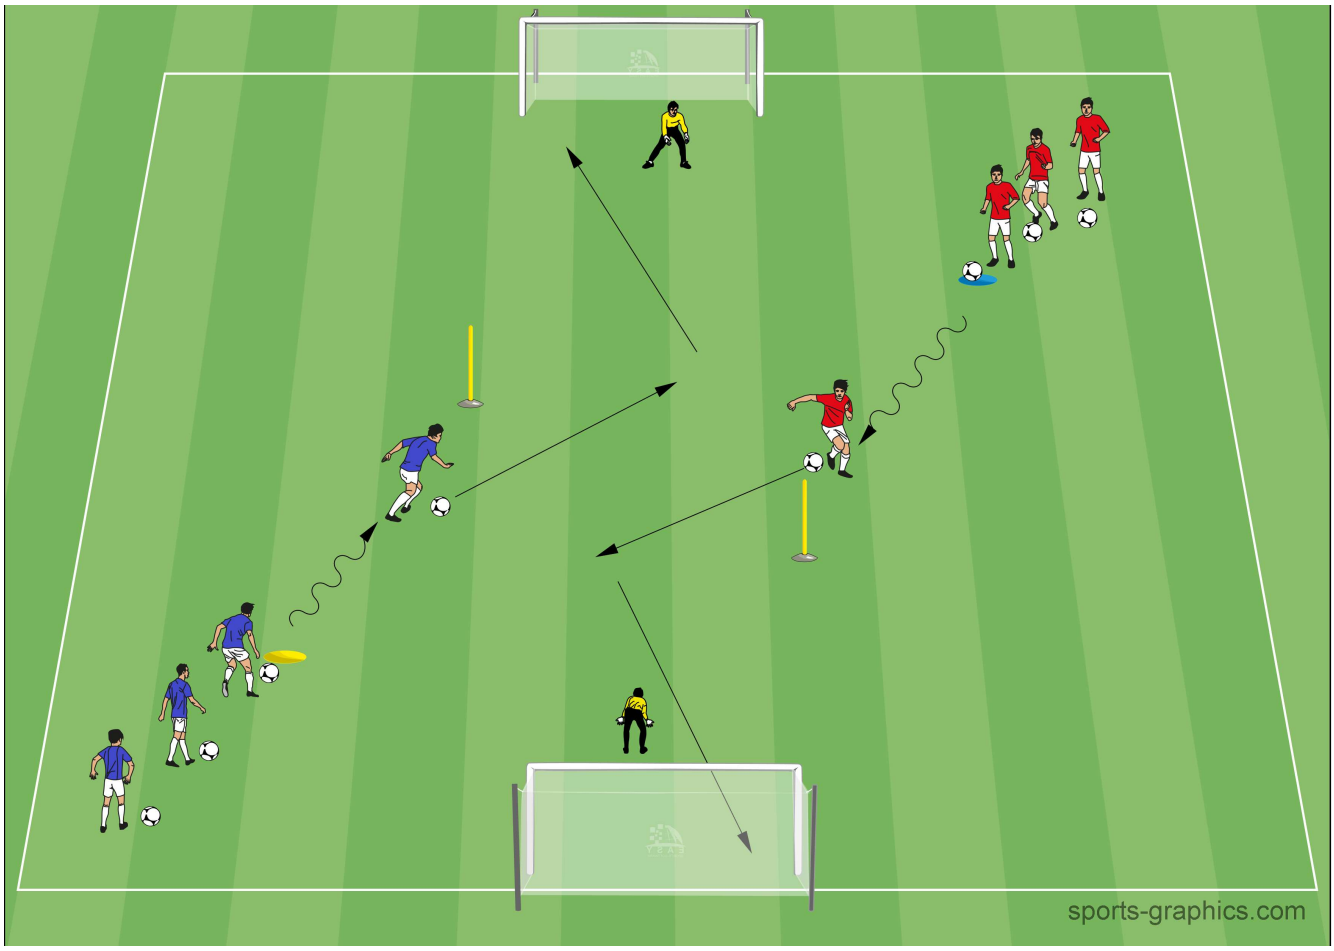
# Shooting Variation 1 - Dribble-Touch To The Side-Shoot



**SETUP**: To maximize repetitions per player set up two goals as shown. Two teams in line at starting cone, two poles (=defender), two large goals. Each player has a ball. The distance from the poles to the center of the goal should be 10 to 15 yards for U8 and U10, and 15 to 20 yards for U12 and U14.
**INSTRUCTIONS**: The front players dribble to the pole, take a touch to the side, and shoot. Rotation: the shooter becomes the goalie, the goalie gets the ball and goes to the back of the line (return to the same line). The cue for players to start dribbling is when the player in front takes the shot. No waiting around, keep it moving so everyone gets lots of repetition.
**COACHING POINTS**: Dribble with the shoe laces, toes pointing down. Soft touches, quick feet (high frequency). Don't get too close to the defender (pole). Take a touch to the side, accelerate to the ball and shoot with the next touch. Shoot with a diagonal leg swing and aim for the back post. Touch to the side to the left if you want to shoot with the left. Shooting: step side by side with the ball, not too far, not too close. Point

the toes of the plant foot toward the target. Lock the ankle joint. Big back-swing, snap the knee joint, and big follow-through swing with the kicking leg. Swing the kicking let up and toward the desired target. The leg swing determines the direction and accuracy of the shot.
